PERSONAL STATEMENT

I'm a Full-Stack Web Developer with a passion for the Front-End. I recently completed the Web Development Immersive course at General Assembly where I gained invaluable practical skills in development including Ruby, Rails, HTML, CSS, JavaScript, Git and more.

I'm naturally inquisitive and get a kick out of figuring out how things work. I'm interested in visual design and making beautiful, meaningful and functional web applications that are usable and accessible to all. I also have an eye for detail so I'll spot that missing parenthesis!

EXPERIENCE

Project Officer, Online Services
State Library of New South Wales
August 2011 – Present

Photoshop	●○○○○

HOBBIES & INTERESTS

Art   Code
Learning   Movies
Music   Photography
Reading   Travelling

PROJECTS

Visit juliaryan.io for more information about the below projects as well as other projects I have worked on.

HISTORIA

historia-app.herokuapp.com

I designed and developed *Historia* to enable people to discover places that they might not have known even existed and learn a bit about the history of these places.

*Historia* is a rails app that also includes a Chrome Extension that overrides the default new tab.

SPARKR

make-sparks-fly.herokuapp.com

Sparkr is a dating service primarily for people over the age of 50 however open to anyone above 18. Two people need to like each other's three moments for a match to occur. A person's three moments show what they like and care about.

*Sparkr* was a group project. We used rails to build *Sparkr*.

I WAS THERE

i-was-there.herokuapp.com

I was there was my first project during the Web Development Immersive course at General Assembly.

Using Last.FM's API, users can search for artists, events and add or read reviews about the event.
